Net profits are therefore used to calculate the performance of the share capital of the company, a crucial measure of the financial results. Each of these profit indicators can be expressed as a one sales and used for the analysis of trends and comparisons with previous years. For example, the operating profit margin is EBIT/Sales X 100 and in the same way, the net profit margin is net net/sales x 100. The more common measures of liquidity are current and quick relationships. The current ratio is calculated by dividing the total current activities by total current liabilities. Having \$ 2 in current activities for each \$ 1 in current liabilities, a 2: 1 ratio, is generally considered a comfortable level of liquidity. The rapid relationship is a hard measure of liquidity. It is calculated by adding cash sales to credits and dividing by current total liabilities. Inventories are excluded from this relationship. A good rapid ratio should be greater than 1: 1. The activities of activities measure the way the company is using its current activities. Average collection period: this relationship indicates the speed with which the company is collecting its credits and compares it with the terms of sales to customers. The formula is: sales made on the balance of credit/accounting credits. For example, if a company carries out annual credit sales of \$ 720,000 and has a balance of current credits of \$ 90,000, the credits are transforming over eight times a year or every 45 days. If the terms of the company's sales are 30 -day net, then a part of the credits balance has passed and needs attention. Cash conversion cycle: companies want to transform their money as much as possible. The cash conversion measures the time taken to buy raw materials, make a product, sell to customers and, finally, collect money from payments. Companies invest a lot of money in the inventory, so turnover is important. Invoiced inventory: the formula for the calculation of the inventory turnover is the cost of the goods divided average inventory balance. For example, if the COGS Ä " is \$980,000 and the average inventory balance is \$153,000, the inventory changes more than six times a year or every 60 days. The amount of debt a company owes company Compared to its total share capitalization, it is a measure of financial force. A moderate quantity of debt is good, but it can be too risky if sales decrease in an economic recession. Acceptable debt-tax relationships vary according to the sector. The manufacturers generally have \$ 1 in total debt for each \$ 1 in shares, a 1: 1. financial institutions, on the other hand, could have debt/equity relationships up to 15: 1. Utilities generally have reports Around 6: 1. Another way to measure the risk of debt is based on the relationship between profits before interest and taxes divided for total interest expenses. Suppose that a company had an EBIT of \$ 120,000 and interest expenses of \$ 30,000. The interest coverage ratio would be 4: 1 or \$ 120,000 divided by \$ 30,000. The vertical analysis provides for the calculation of line items on the income statement as percentages of total sales and accounts in the budget as percentages of total activities. These figures are used for horizontal comparisons from year to the other. The horizontal analysis compares relationships from several years of balance by side to detect trends. These include comparisons for profit margins, liquiditys, turnover and financial leverage. For example, let's assume that the average days of the suspended credits three years ago were 38 days. So, the following year he went up to 41 days and last year, the suspended days showed 52 days.

Unless the company has changed its terms of sales in customers, this would be a disturbing trend that requires attention to management. Companies always have some kind of competition and managers must know how well they are well compared to their competitors. Compare the average relationships of the sector with the companies provides an indication of the company's strength and points of the company. Suppose the profit margin Ä " Ä l o o ,ittodorp id xim osrevid nu id assac a Ä ?eroirefni "Ä adneiza'lled ottiforj id enigram li ©Änerp" emralia id assac eresse ebbervod aznerreffid atseuq ,otnecrep 63 led "Ä adneiza'lled odrol enigram li e otnecrep 24 led "Ä erottes nu rep the company's cost to fabricate its products is higher and less efficient than its competitors? Any of these reasons means that management needs to investigate and find the problem. Profits are important, but they can be manipulated by using different accounting methods. As an example, depreciation methods can be accelerated or, conversely, spread out over more years. Either way will change the amount of reported profit. Flow of funds analysis, on the other hand, tells more of the truth: where the money came from and, more specifically, where it went. Suppliers, expenses and employees are paid with cash, not profits. Studying the flow of funds statement will reveal if the company is actually producing a positive cash flow from operations or is relying on borrowed money and supplier credit to fund its operations. This type of information is not available from an income statement. The first hurdle for a business owner is to sell enough products or services to at least cover all the company's fixed costs. This is its break-even sales volume. An objective for managers is to find ways to lower the break-even point. This could be done by reducing fixed costs, improving productivity, lowering the cost of goods sold or selling more of the products that have higher profit margins. What is one thing that creditors, investors, management, and regulatory authorities all have in common? In order to do their job well, all of them rely in one way or another on financial statement analysis. Creditors rely on financial statements to evaluate whether a company or organization will be able to pay back a debt. Regulatory authorities, like the US Securities and Exchange Commission (SEC), rely on financial statements to determine whether a company meets the accounting standards required of a publicly traded company. Investors rely on financial statements in order to understand whether investing in a company would be profitable. And management relies on financial statements to make company decisions and communicate with investors and key stakeholders. A € Ä , - Ä "Ä the accounting is the language of business and the budgets of a company are his way of communicating accounting information to his owners and the tax government ä € , says Thomas R. Itelson, author of Financial Guide information At the time to the understanding and creation of financial reports and visual guide to financial reports: overview for non-financial managers and investors. "Includes sales, costs, expenses, profits and activities" In a nutshell, the business world could not exist in its current form without budgets. But what is the analysis of the budget? What are the most common types of budgets? And how do you lead an analysis? Find out more about this fundamental commercial qualification below. What is the analysis of the budget? The analysis of the budget is the process that an individual undertakes to analyze the various financial documents of a company in order to make a decision informed on this activity. While the specific data contained in each financial statement will vary from company to company, each of these documents is designed to offer information on the health of the company. They are also essential to monitor the performance of a company over time, in addition to understanding how a company is progressing towards key strategic initiatives. At the center, says Itelson, the analysis of the budget allows an individual to "look at money, goods and services". Related: Finance vs.

Accounting: what is the difference? Common types of financial statements will often produce a series of financial statements, each of which is adapted to the needs of a particular audience. The information contained in each of these documents will vary according to the need. The most common types of budgets that can be encountered include: budgets, income statements, cash flow declarations and statements of the net assets. 1. Budget sheets a The Ä sheet is designed to communicate the "book value" of a company. Ä a simple accounting of all assets, liabilities and shareholders of the company and provides analysts with a quick snapshot of how a company he is performing and plans to perform. Most financial statements follow this basic formula: assets = liabilities + shareholder capital of an asset. Äç everything ciÄ² that the company has a quantifiable value. CiÄ² may include property physical (vehicles, real estate, unsold inventory, etc.), andÄ² property non-physical (patents, trademarks, etc.). Liabilities refer to the money that the company you owe a debtor. CiÄ² may include outstanding management fees, debt payments, rent and utility payments, vendor money, taxes, payable obligations, and more. Fairness of the shareholders Ä is a term which generally refers to the equity of a company. Reflects quantity of money that would have remained if all the assets were sold and all liabilities you pay. This money belongs to shareholders, whether it is a private owner or public investors. 2. Declarations of Income A profit or loss account , generates in order to communicate how much money you earned over a period of time. They are often found as quarterly and annual reports. In addition to disclosing high-level revenue, the income tax returns detail a range of other metrics that can be useful to analysts and investors. These include: operating expenses, which describe in detail every expense the company found during the depreciation of the reporting period, which quantifies the extent to which the assets of a company (e.g. equipment or vehicles) have lost value over net time, which subtracts the expenses of the company its gross revenue for the purpose of determining its total level of profit or For action (EPS), which divides net profit for the total number of shares in circulation 3. Cash flow an account extract is an account indicating that it describes in detail how a company receives and spends its own money. These too are they ilga erinrof id olleuq "Ä A&DM id opocs ol" ,CES al odnoceS ,rotiderc e itsilana ,irotitsevni rep elitu etnemlibidercni eresse "Äup ehc li ,otnemirefir id odoirep li etnarud ottaf ah iuc ni odom li otugese aibba Äteicos al ©Ähcrep lus ovitnuigga otsetnoc nu ereneg ni Ärinrof A&DM nu ,©Äs rep e ©Äs ni oirraiznanif otnemucod nu ais non enebbeS ,iraiznanif itroppar i erangapmocca rep atategorp , Äteicos alled enoizerid allad ottircs otnemucod nu "Ä A&DML )A&DM( tmemeganaM id isilana e enoissucsID .5 .itad itnup irtla e )oroseT led inoiza itamañc( itsinoiza ilgad otuneted etnemetedecerp olotit isaislaug otatsiugcair onem o aibba Äteicos al ehc ottaf lus ilgatted ©Ähcnon ,etreforp e inumoc inoiza elled erolav led e inoiza id oremun led inoizarrav el Ärelangens ereneg ni itsinoiza ilged elatipac id enoizarrachid an'l ,itavirp o icilbbup irotitesevni onais itsinoiza iat ehc ais ,itsinoiza ilgad otuneted otten oinomirtap len itnemaißmaC oilgatted ni evircsed ehc oilgatted ni ailgatted ehc oicnalib nu "Ä oiranoiza elatipac led oiranoiza elatipac led itsinoiza ilged enoizarrachid. 4 otten oinomirtap led ehc otibed led otneamaznanif lad ais assac id ossulf li oilgatted ni evircsed ehc li ,otibed non e aituarig Ätiduqil odnazzillitu( erutzazzerta e ilociev ,iraillibommi Ätivitta emoc emoc , Ätivitta id atidnev allad o otsiuqca'llad otareneg assac id ossulf li oilgatted ni onovircsed ehc ,eseps id ehc etartne id ais otmetitsevni id Ätivitta el eserpmoc ,zivres o ineb ious i angescnoc ehc Äteicos allad otareneg assac id ossulf li oilgatted ni onovircsed ehc ,evitarepo Ätivitta ,inoizes ert ni esividdus ereneg ni onos assac id ossulf led inoizarrachid eL ,airaiznanif enoizisop anoub ni "Ä Äteicos anu es eranimretted rep irotaloqer e irotiderc ,irotitesevni ad otazzillitu enev e enimret ognul a ehc everb a ais erarepo id Äteicos anU Äitcapac al ettefir assac id ossulf II ,eseps eus el erirpoc rep idos i ah ehc otnatñf olos erarepo "Äup Äteicos anU ,issulfed e assac id issulfia information that the management of the company considers it necessary for an understanding of its financial conditions, changes in financial conditions and the results of its operations. It is intended to help investors see the company through the While an MD&A should always be taken with a grain of salt, the Sarbanes-Oxley Act of 2002 mandates that senior corporate officers personally certify in writing that the company's financial statements comply with SEC disclosure requirements and fairly present, in all material aspects, the operations and financial condition of the issuer. çÄÄÄOfficers who sign off on financial statements that they know to be inaccurate will go to jail (if and when caught),çÄÄÄ Itelson says. How to Conduct Financial Statement Analysis Typically, professionals will follow one of two common methods to analyze a companyçÄÄÄs financial statements: Vertical and horizontal analysis, and ratio analysis. Vertical and Horizontal Analysis Vertical and horizontal analysis are two related, but different, techniques used to analyze financial statements. They each refer to the way in which a financial statement is read, and the comparisons that an analyst can draw from that reading. Both types of analysis are critical to gaining an accurate understanding of the information provided in a financial statement. Vertical analysis is the process of reading down a single column in a financial statement. Whereas horizontal analysis is used to identify trends over time, vertical analysis is used to determine how individual line items in a statement relate to another item in the report. For example, in an income statement, each line item might be listed as a percentage of gross sales. Horizontal analysis, on the other hand, refers to the process of reading current financial data in comparison to previous reporting periods. Also called çÄÄÄTrend analysis,çÄÄÄ reading a financial statement in this way allows an individual to see how different financial metrics have changed over time: For example, whether liabilities have increased or decreased from Q1 to Q2. Ratio Analysis Ratio analysis is the process of analyzing the information in a financial report as it relates to another piece of information in the P F iuc id eznetepmoc el erisiuqca da itratuia "Äup inoizpo id eires anu ,oroval out led inoiznuf el oilgem ereglvps rep o esseretni out li rep ais ,oicnalib id isilana eriugese a erarapmi iouv es esseccus li rep ongosh iah iuc id eznetepmoc el erarapmi ,ecnamrofrep a atosoppots "Ä enoitseuq ni adneiza'l es eripac rep erottes led dradnats ilga ottepsir otroppar li eratrorfnoc elibbissop ehcna Ä ,opmet len odnatropmoc ats is Äteicos al emoc eripac rep itnedecerp idoirep i noc olratrorfnoc ioup ,etnerroc odoirep li rep otroppar nu otaloqlac reva oppoD ,etnaloric elatipac led revonrut id ossat li e oiratnevni'llled revonrut id ossat li ,itiderc ied revonrut id ossat li ,itnoc ied revonrut id ossat li onodulcni Ätivitta id itroppar itnatropmi inuclA ,esrosir odnazzillitu ats adneiza'nu emoc us inoizamrofni onorffo Ätivitta id itroppar i : Ätivitta id itroppaR ,otibedda id assif arutrepoc al e otibed id oizivres led arutrepoc id otroppar li ,oiranoiza- otibed otroppar li onodulcni airaiznanif avel id itroppar itnatropmi inuclA ,inoizarepo eus el erenetnam rep otibed lad adnepid Äteicos anu otnauq us inoizamrofni onorffo airaiznanif avel id itroppar i :airaiznanif avel id itroppaR , Ätiduqil id eicidni'l e etnerroc otroppar li ,itnatnoc ni arutrepoc id otroppar li onodulcni Ätiduqil id itroppar itnatropmi inuclA .
